Subject: **Important Update on the MXZ-3B24NA Energy Star® and Tax Credit Combinations**

Great news! The Mitsubishi Electric MXZ-3B24NA multi-zone system qualifies for both Energy Star and the Federal Tax Credit when combined with the following indoor units:

- MXZ-3B24NA with two MSZ-GE06NA and one MSZ-GE09NA indoor units
- MXZ-3B24NA with two MSZ-GE06NA and one MSZ-GE12NA indoor units

In the 2-ton capacity, multi-zone category, this gives our MXZ-3B24NA system selection the most options available at this time.

The [AHRI Directory](#) accurately reflects both of these qualifying indoor unit combinations. A revised copy of the "[Tax Credit Letter](#)" is also available reflecting these qualifying combinations.

And don't forget that our 20,000 Btu/h MXZ-2B20NA multi-zone outdoor unit connected with two MSZ-GE09NA wall-mounted indoor units also qualifies for Energy Star and Tax Credit.

Other combinations of indoor units are available with the multi-zone systems and are based on allowable capacity. The multi-zone systems will accommodate any combination of the listed indoor unit styles (such as wall-mounted, ducted, floor-standing etc.) as long as the capacity is within the allowable installed maximum. See the submittal data online in the [Document Library](#) for the individual MXZ outdoor unit for maximum installed capacity and approved combinations.

Note: MXZ outdoor unit port sizes are listed in the submittal data also, so consideration should be given regarding port adapters if required to match indoor unit refrigerant line sizes.

We are currently updating the Mitsubishi catalog with these qualifying Energy Star and Federal Tax Credit systems, indoor capacity combinations, and port sizes. Expect to see it soon!

Contact your local sales manager if you have any questions.
