

HEAT CONTROLLER, INC.

Heat Controller Water Source Heat Pumps have been added to the Aireco product line.

Features:

- Quiet Operation
 - Variety of technologies & insulation deaden vibration & sound attenuation, making these among the quietest units on the market today
- ECM Motor
 - Latest high tech design provides a multitude of benefits including silent ramp-up, auto adaptability to the system, a speed for every mode & much more – all designed for even temperatures throughout the home
- Two Stage Compressor
 - Copeland multi-stage scroll compressor provides steady comfort at higher efficiencies than single stage models
- Microprocessor Controls
 - Solid state controls include performance monitoring system that signals a potential problem before a lockout occurs. Similar to your car's "check engine" light
- Value Added
 - Hot water generator with built-in pump supplies domestic hot water when the unit is running in either heating or cooling mode
- Easy Installation & Service
 - Panels on 3 sides are easily removed for access to components
 - Back-setting valves are included

HTV Series:

- Self-contained, packaged units designed for easy installation
- Variable speed blower motor provides wide range of operational modes to further maximize comfort & efficiency

HTS Series:

- Split system units designed to be coupled with an air handler or add-on furnace coil
- Systems offer flexibility of an all-electric or dual fuel system
