NEW PRODUCT! Now in Stock

CONTRACTOR-FRIENDLY INVERTER DUCTED

Available now through Aireco!

R-454B (A2L) Inverter Ducted Systems built for consistent comfort & fewer call-backs

WHY CONTRACTORS LIKE IT.

A precision inverter platform that pairs an inverter compressor with an ECM fan motor for smooth modulation and stable, efficient operation.

- ➔ **Flexible controls** — RS-485 communicating or 24V to fit any install
- ➔ **Built-in protection** — pressure switches and temp sensor guard the compressor
- ➔ **Smart defrost** — six modes clear frost fast and restore full heating capacity
- ➔ **Better Humidity Control** — ECM fan speed automatically reduces when high humidity is detected, giving the coil more time to extract moisture from the air
- ➔ **Smoother Comfort Delivery** — the inverter compressor continuously adjusts capacity to match load, eliminating the temperature swings of single-stage systems
